Experiment - 3

Student Name: Aryan Srivastav

Branch: BE-CSE

Semester: 5th

Subject Name: Full Stack- I

Subject Code: 23CSP-339

UID: 23BCS10135

Section/Group: KRG-2B

Date of Performance: 11/9/25

Aim: To build an interactive library management interface using React components with full CRUD (Create, Read, Update, Delete) functionality.

Objective: The main objective is to-

1. Design a book listing component.
2. Implement search functionality.
3. Add a form for new book entries.
4. Enable update and delete capabilities for each book.
5. Manage state using React hooks.

Hardware/Software Requirements:

1. Processor: Intel i5/Ryzen 5 or higher
2. RAM: 8GB minimum.
3. Display: 1920x1080 resolution.
4. Node.js v18+
5. React.js v18+
6. VS code with ES7 + extensions.
7. JSON server(for mock PIs).

About the Experiment -

This experiment demonstrates how to build a dynamic and responsive Library Management System using React.

Concepts covered-

1. Component-based architecture.
2. State management with hooks(useState, useEffect).
3. Controlled forms and event handling.
4. Conditional rendering.
5. RESTful API interaction with fetch.

Code implementation -

```
import React, { useState, useEffect } from 'react';
```

```
function App() {
```

```
  const [books, setBooks] = useState([]);
```

```
  const [formData, setFormData] = useState({ title: "", author: "" });
```

```
  const [searchTerm, setSearchTerm] = useState("");
```

```
  const [editingBookId, setEditingBookId] = useState(null);
```

```
  // Fetch initial books from JSON Server
```

```
  useEffect(() => {
```

```
    fetch('http://localhost:3001/books')
```

```
      .then(res => res.json())
```

```
      .then(data => setBooks(data));
```

```
  }, []);
```

```
  // Handle form input change
```

```
  const handleChange = e => {
```

```
    setFormData({ ...formData, [e.target.name]: e.target.value });
```

```
  };
```

DEPARTMENT OF COMPUTER SCIENCE & ENGINEERING

Discover. Learn. Empower.

```
// Handle Add / Update book

const handleSubmit = e => {

  e.preventDefault();

  if (editingBookId) {

    // Update book

    fetch(`http://localhost:3001/books/${editingBookId}`, {

      method: 'PUT',

      headers: { 'Content-Type': 'application/json' },

      body: JSON.stringify(formData),

    })

    .then(res => res.json())

    .then(updatedBook => {

      setBooks(books.map(book => (book.id === editingBookId ? updatedBook :

book))));

      setEditingBookId(null);

      setFormData({ title: "", author: "" });

    });

  } else {

    // Add new book
```

```
fetch('http://localhost:3001/books', {
  method: 'POST',
  headers: { 'Content-Type': 'application/json' },
  body: JSON.stringify(formData),
})

.then(res => res.json())

.then(newBook => {
  setBooks([...books, newBook]);

  setFormData({ title: "", author: "" });
});
}
```

```
const handleEdit = book => {  
  setEditingBookId(book.id);  
  setFormData({ title: book.title, author: book.author });  
};
```

```
// Delete book
```

```
const handleDelete = id => {  
  
  fetch(`http://localhost:3001/books/${id}`, {  
  
    method: 'DELETE',  
  
  }).then(() => {  
  
    setBooks(books.filter(book => book.id !== id));  
  
  });  
  
};  
  
  
// Filtered books for search  
  
const filteredBooks = books.filter(book =>  
  
  book.title.toLowerCase().includes(searchTerm.toLowerCase())  
  
);  
  
  
return (  
  
  <div style={{ padding: '20px' }}>  
  
    <h2>Library Management</h2>  
  
  
  
    { /* Add / Update Book Form */ }  
  
    <form onSubmit={handleSubmit}>  
  
      <input
```

```
name="title"
```

```
placeholder="Title"
```

```
value={formData.title}
```

```
onChange={handleChange}
```

```
required
```

```
/>
```

```
<input
```

```
name="author"
```

```
placeholder="Author"
```

```
value={formData.author}
```

```
onChange={handleChange}
```

```
required
```

```
/>
```

```
<button type="submit">{editingBookId ? 'Update' : 'Add'} Book</button>
```

```
</form>
```

```
{/* Search Bar */}
```

```
<input
```

```
placeholder="Search by title..."
```

```
value={searchTerm}
```

```
      onChange={e => setSearchTerm(e.target.value)}

      style={{ marginTop: '10px' }}

    />

    { /* Book List */ }

    <ul>

      {filteredBooks.map(book => (

        <li key={book.id}>

          <strong>{book.title}</strong> by {book.author}

          <button onClick={() => handleEdit(book)}>Edit</button>

          <button onClick={() => handleDelete(book.id)}>Delete</button>

        </li>

      ))}

    </ul>

  </div>

);

}

export default App;
```
